Subject: hyal potency

Barry,

I sent 1 10ml sample to ARL to test the potency of the "damaged" hyal, and it came back at 91.43%. Not too shabby. I imagine we can use it when and if we have to. If we were to use it, I would think that you would want us to increase it by ~10%. I will toss the results under your door too. We can chat later about it all. What a shitty-ending to the ball game too.
